关于通过引导初步了解GitHub的实验报告

- 初步接触了解编程工具的应用
- 通过edge浏览器搜素GitHub网址，通过系统引导创建自己的账号，，在主页上编辑自己的个人信息。通过库选项创建自己的私人仓库，通过引导入readme，之后将自己的GitHub库导入至自己电脑（没有使用打包软件)。
- 借助visual studio code 完成实验报告md格式的编写以及用typedown将格式转化为PDF是我在此次任务中学习的最大的收获。

Experimental Report on Initial Understanding of GitHub through Guidance

- Initial exposure to the application of programming tools
- Search the GitHub URL through the edge browser, create your own account through system guidance, and edit your personal information on the homepage. Create your own private repository through the library option, boot into readme, and then import your GitHub repository to your computer (without using packaging software).
- The use of visual studio code to complete the writing of the experimental report in MD format and the use of typedown to convert the format to PDF are the biggest gains I learned in this task.
